

Summary

- Full Stack Developer with **3 years of industry experience**, hold B.Sc. degree in Software Engineering, looking for my next challenge in the high-tech industry.
- Experienced in building scalable web and mobile applications using React, Node.js, React Native, SQL, and cloud technologies. Strong background in backend development, RESTful APIs, database design, and modern development workflows.
- Passionate about clean code, teamwork, and delivering real business value.

Education

2021-2026: B.Sc. Software Engineering, ORT Braude College of Engineering.

Courses: Data Structures and Algorithms, OOP (Java), Database Management Systems (SQL), Operating Systems, Web development, introductions to ML.

Projects:

- **JavaFX and MySQL application:** developed a JavaFX and MySQL application named "Go Nature" for park management. Implemented a client-server architecture to ensure efficient data handling and communication. Utilized Scene Builder to design an intuitive and user-friendly UI, enhancing user experience and accessibility.
- **PillMate – Smart Medication Adherence System:** support elderly and chronic patients, as well as their caregivers, by improving medication adherence through intelligent reminders and real-time monitoring. **My role:** designing and developing the mobile application, implementing backend services for medication scheduling, dose tracking, and user management, and integrating data from an IoT-enabled smart pillbox to monitor medication intake. **Technologies used:** React Native (Expo) and TypeScript for the client application, with a cloud-based backend leveraging Firebase/Supabase, RESTful APIs, and IoT components based on ESP32 sensors, supported by Git-based version control and iterative MVP development practices.

2018-2020: Practical Software Engineering (Diploma)

Courses: C language, java, assembly, Databases and SQL, Web Development, android and Data Structures and Algorithms.

AI & Productivity Tools : Cursor ,Claude AI, GitHub Copilot, AI-assisted development workflows

Work Experience

2020-2023: Full Stack Developer at R.H Company.

Key role:

- Developed with emphasis on back-end architecture using Node.js, and databases -MySQL,
- designed scalable RESTful APIs and implemented secure authentication systems,
- collaborated with front-end teams to integrate React.js components and utilized Docker for efficient deployment.

Leadership & Activities

2022-2023: Python Workshop Instructor

Conducted introductory Python workshops for students, teaching programming fundamentals and practical problem-solving skills.

Training and Certifications

2025-present: Introduction to Cloud Computing on AWS via Udemy (self-learning).

Learning: Amazon EC2, Amazon EBS, Amazon EFS, Amazon S3 and (CI/CD) pipeline.

Languages: Hebrew- Fluent | Arabic- Native | English- Fluent
